

SAFETY SHOE - ARTICLE 1157

Shoes are identity of a true gentleman. They speak a lot about the image and individuality of a person. But you cannot carry the same type of footwear at all the places. When working outside the comfort zone, special shoes are required for foot safety.

The concept of safety shoes has been come in vogue as a protective equipment for workers who face hazardous work conditions and are prone to damage their foot due to sharp piercing edges, pinch points, falling or rolling objects, loops of ropes under tension, splinters, rotary machinery, hot objects, electricity, slippery surface, chemicals or even bad weather.
